

# Definition

- **ROUTING :**

*Routing is process of forwarding packets from one network to another, this is sometimes referred to as a relay system*

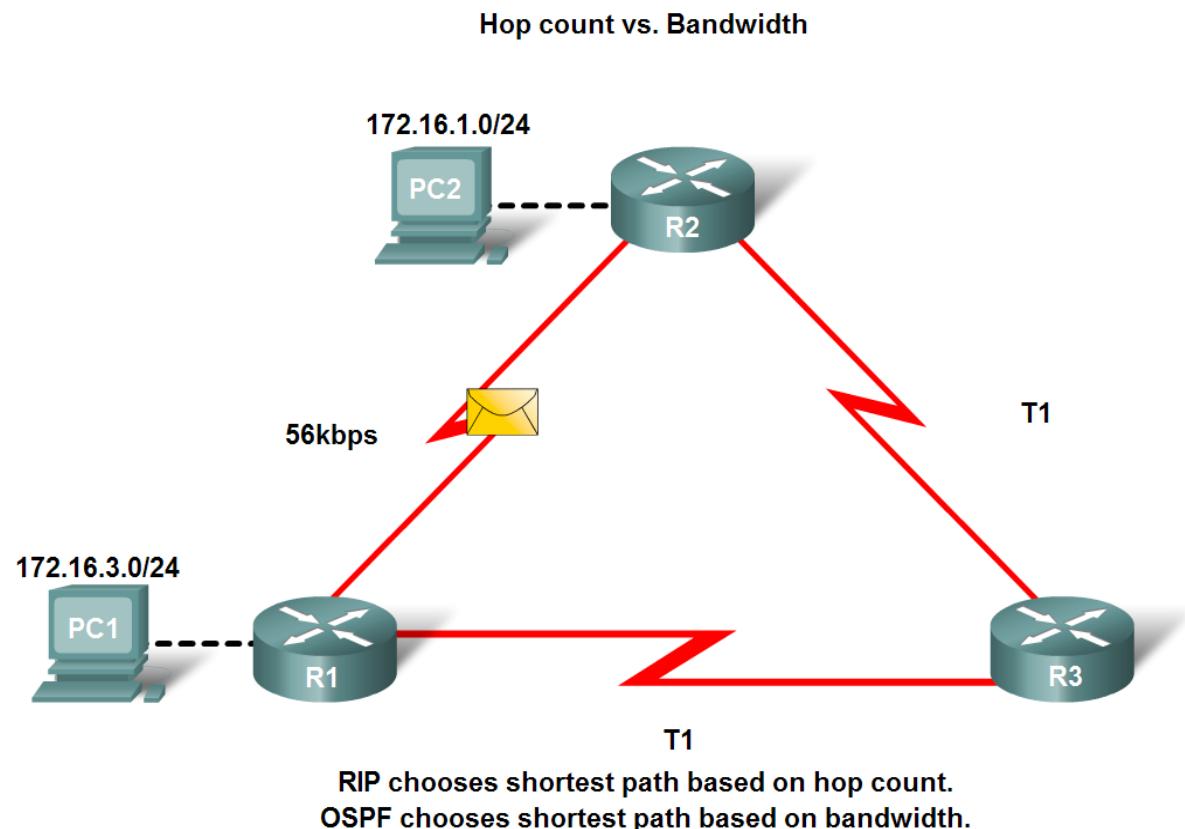

# Jenis-Jenis Routing

- Routing Statik (Static Routing)
  - Cara pembuatan tabel routing secara manual
  - Jalur-jalur ke tujuan ditentukan oleh administrator secara manual
  - Default route sama dengan statik, digunakan pada saat alamat sumber ke tujuan tidak diketahui atau pada waktu tabel routing tidak bisa menyimpan informasi ke dalam tabelnya lagi.
- Routing Dinamis (Dynamic Routing)
  - Cara membuat tabel routing secara dinamis berubah-ubah secara otomatis jika topologi jaringan berubah
  - Bersifat adaptif algoritma
  - Pemilihan jalur ditentukan oleh protocol secara otomatis pada saat jaringan berubah ini semua tergantung pada pengetahuan tabel dan penjadwalan waktu distribusi informasi ke semua router

# METRICS

Digunakan oleh algoritma routing untuk menentukan/memilih rute yang terbaik

- Bandwidth
- Cost
- Delay
- Hop count
- Load
- Reliability

# Algoritma Routing

## Routing Static

- Pohon Turunan (Sink Tree)
- Routing Lintasan Jarak Terpendek
- Algoritma Flooding
- Algoritma aliran beban

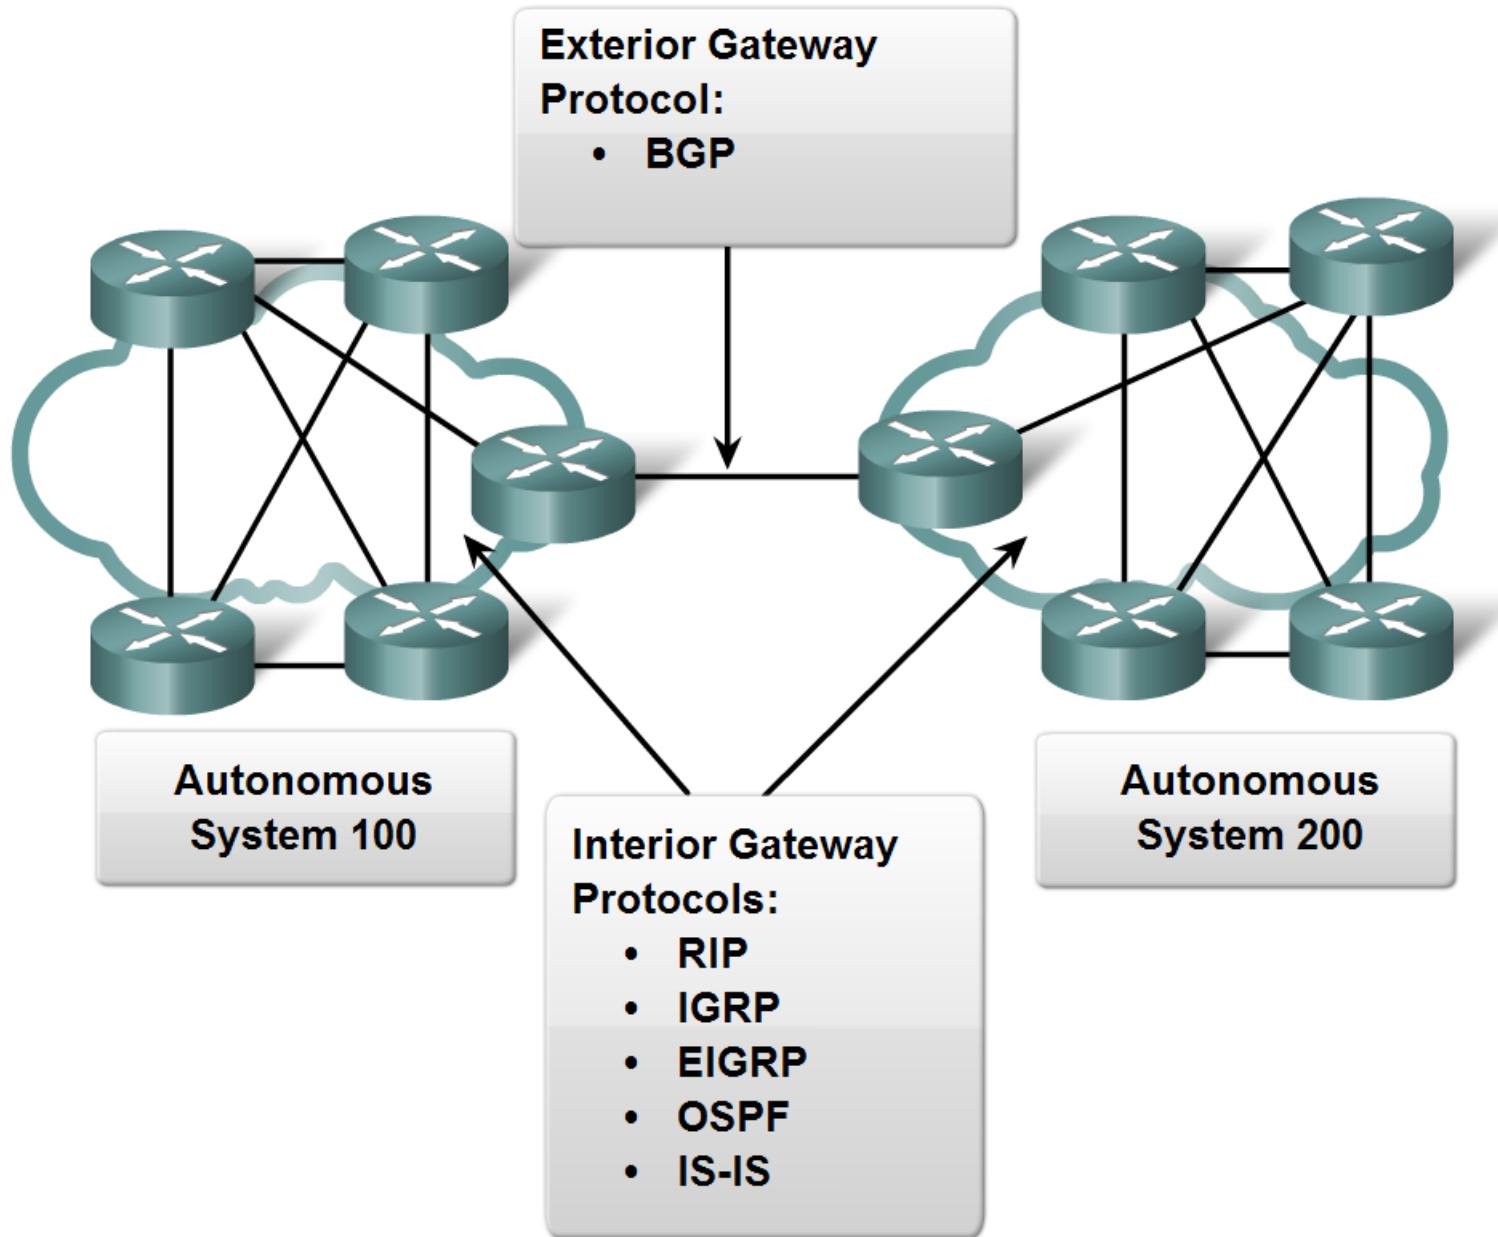

## Routing Dinamic

- Algoritma Vektor Jarak (Distance Vector Algorithm)
- Algoritma Keadaan Link (Link State Algorithm)
- Routing Host Bergerak (Mobile Host Routing)

# Routing Protocols

- IGP (Interior Gateway Protocol)
  - Alat komunikasi pada sebuah kumpulan jaringan ditempatkan untuk menghasilkan jalur-jalur optimal serta dapat menanggapi dengan cepat tentang perubahan topologi jaringannya
  - IGP melakukan pertukaran informasi routing pada sebuah SA jaringan yang terhubung dan diketahui informasinya sehingga menjadi seperti jaringannya sendiri
- EGP (Eksterior Gateway Protocol)
  - Pertukaran informasi jalur-jalur pengiriman data antar dua buah SA atau lebih pada jaringan internet atau yang lebih luas

## IGP vs. EGP Routing Protocols

# Protocol IGP

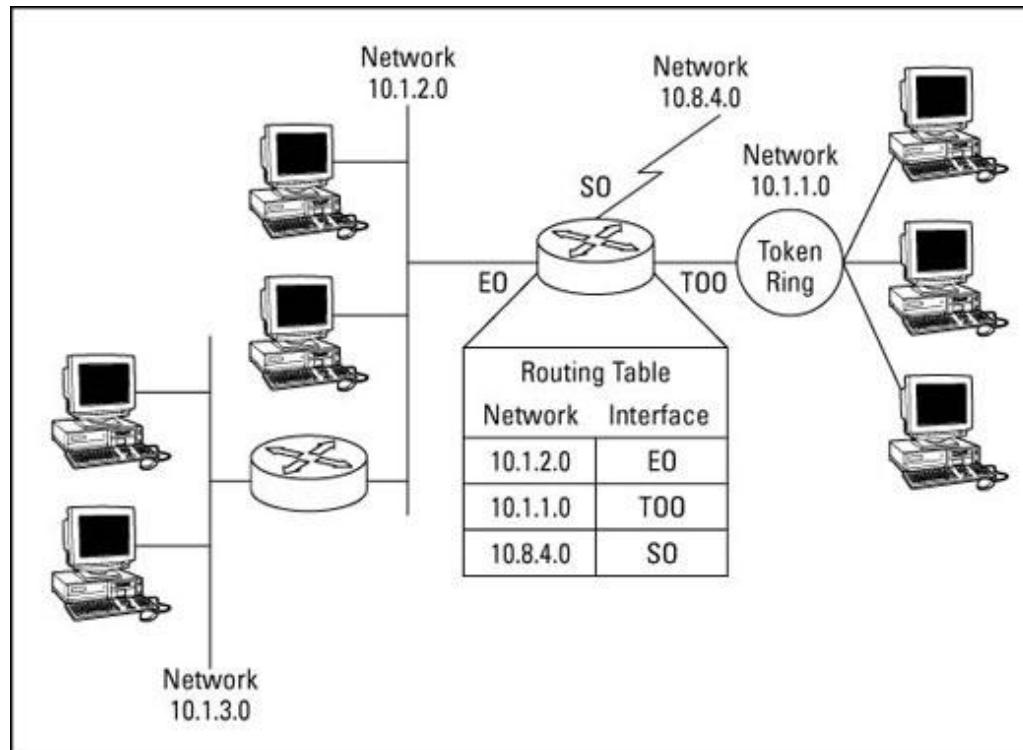

- IGP (Interior Gateway Protocol)
  - Distance Vektor : berdasar vektor jarak : RIP (Routing Internet Protocol), IGRP (interior Gateway Protocol)
  - Link State Berdasar keadaan Link : OSPF (Open Shortest Path First)
  - Hybrid (Gabungan dua protokol diatas) : EIGRP (Enhanced Interior Gateway Routing Protocol)

# Protocol EGP

- EGP (Exterior Gateway Protocol)
  - Routing untuk pertukaran informasi jalur-jalur pengiriman data antar dua buah SA atau lebih
    - BGP (Boerder gateway Protocol)
    - EEIGRP (Exterior Enhanced Interior Gateway Rouitng Protocol)

# Tabel Routing

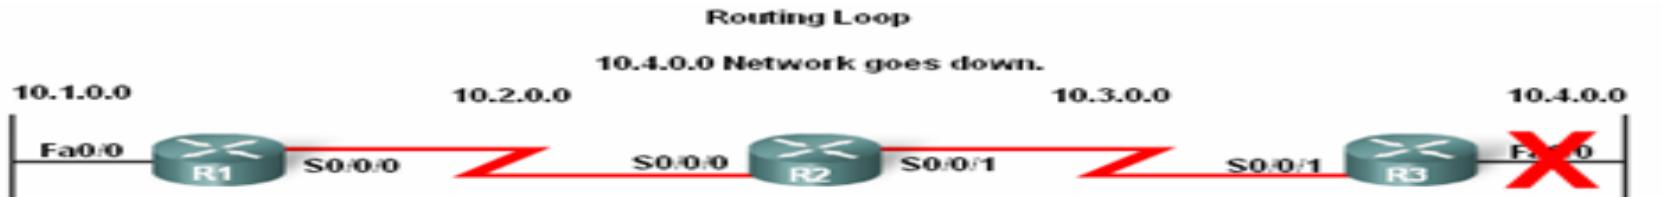

- Tabel yang berisi informasi yang digunakan untuk meneruskan paket ke tujuan dan tersimpan dalam router

# Tabel Routing

- Fungsi Utama Tabel Routing
  - Pengetahuan-pengetahuan apa yang harus dimasukan ke dalam tabel
  - Informasi dalam tabel untuk efisiensi dan mempercepat pencarian jalur
  - Memperbanyak jalur-jalur ke tujuan yang bisa ditulis Protocol pada routing dinamis sangat bergantung pada algortima routing yang menghasilkan suatu tabel routing pada setiap router secara otomatis walaupun terjadi perubahan kondisi jalur atau perubahan topologi.

# ROUTING LOOP CONDITION

Network	Interface	Hop
10.1.0.0	Fa0/0	0
10.2.0.0	S0/0/0	0
10.3.0.0	S0/0/0	1
10.4.0.0	S0/0/0	1

Network	Interface	Hop
10.2.0.0	S0/0/0	0
10.3.0.0	S0/0/1	0
10.1.0.0	S0/0/0	1
10.4.0.0	S0/0/1	1

Network	Interface	Hop
10.3.0.0	S0/0/1	0
10.4.0.0	Fa0/0	0
10.2.0.0	S0/0/1	1
10.1.0.0	S0/0/1	2

Before R3 can send an update, R2 sends an update.

Network	Interface	Hop
10.1.0.0	Fa0/0	0
10.2.0.0	S0/0/0	0
10.3.0.0	S0/0/0	1
10.4.0.0	S0/0/0	1

Network	Interface	Hop
10.2.0.0	S0/0/0	0
10.3.0.0	S0/0/1	0
10.1.0.0	S0/0/0	1
10.4.0.0	S0/0/1	1

Network	Interface	Hop
10.3.0.0	S0/0/1	0
10.4.0.0	S0/0/1	2
10.2.0.0	S0/0/1	1
10.1.0.0	S0/0/1	2

Network	Interface	Hop
10.1.0.0	Fa0/0	0
10.2.0.0	S0/0/0	0
10.3.0.0	S0/0/0	1
10.4.0.0	S0/0/0	1

Network	Interface	Hop
10.2.0.0	S0/0/0	0
10.3.0.0	S0/0/1	0
10.1.0.0	S0/0/0	1
10.4.0.0	S0/0/1	1

Network	Interface	Hop
10.3.0.0	S0/0/1	0
10.4.0.0	S0/0/1	2
10.2.0.0	S0/0/1	1
10.1.0.0	S0/0/1	2

# Solusi Routing Loop

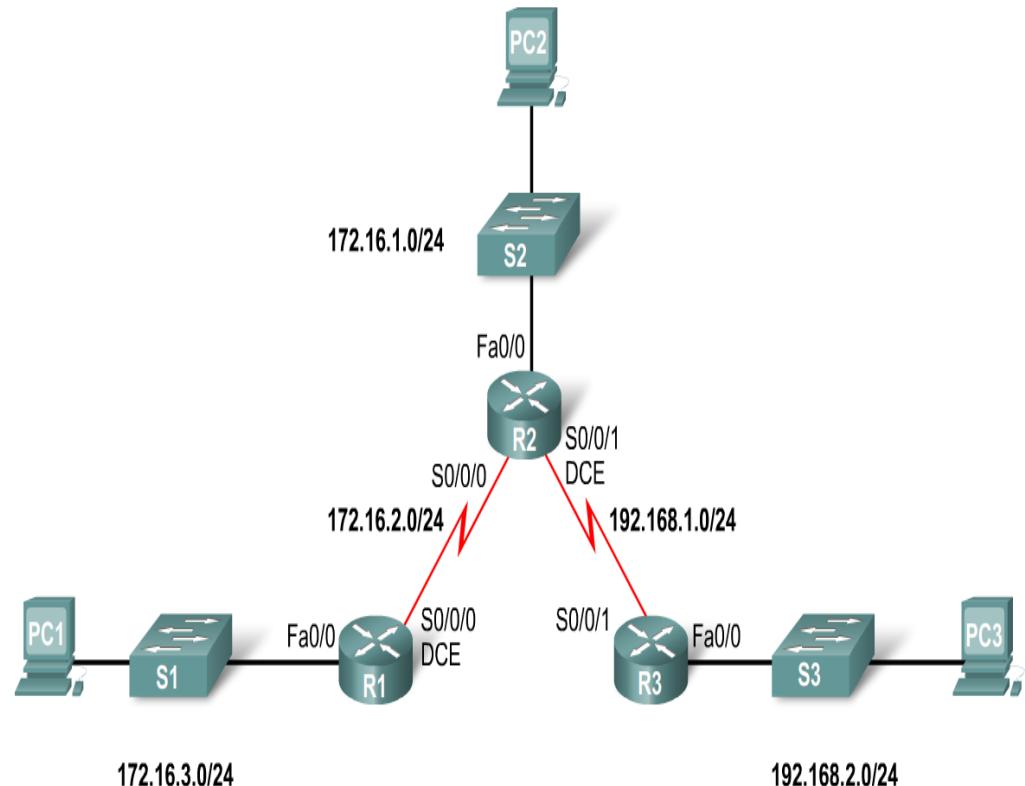

- Holdown Timer
  - Waktu untuk menghindari pengiriman berita pembaruan paket yang tidak mencapai tujuan
- Route Poisoning
  - Menandai paket yang tidak tercapai tujuannya sebagai tanda jumlah lompatan tidak tercapai
- Split Horizon
  - Menghindari pengiriman data kembali ke alamat pengirim
- Triggered Update
  - Meperbaharui perubahan dalam jaringan dengan cepat saat terjadinya perubahan

# Protocol Routing Dinamis IGP

- RIP (Routing Internet Protocol)
- IGRP (Interior Gateway Routing Protocol)
- OSPF (Open shortest Path First)

# STATIC ROUTING

- Interface Serial
  - S0/0/0 dsb
  - DCE dan DTE
  - Untuk Interface serial DCE harus diberi CLOCK

# STATIC ROUTING

## Konfigurasi Interface

Device	Interface	IP address	Subnet Mask	Def. Gateway	Status
R1	Fa0/0	172.16.3.1	255.255.255.0	n/a	
	S0/0/0	172.16.2.1	255.255.255.0	n/a	DCE
R2	Fa0/0	172.16.1.1	255.255.255.0	n/a	
	S0/0/0	172.16.2.2	255.255.255.0	n/a	
	S0/0/1	192.168.1.1	255.255.255.0	n/a	DCE
R3	Fa0/0	192.168.2.1	255.255.255.0	n/a	
	S0/0/1	192.168.1.2	255.255.255.0	n/a	
PC1	NIC/Fa	172.16.3.10	255.255.255.0	172.16.3.1	
PC2	NIC/Fa	172.16.1.10	255.255.255.0	172.16.1.1	
PC3	NIC/Fa	192.168.2.10	255.255.255.0	192.168.2.1	

# Konfigurasi Interface

## Summary of interface status with show ip interface brief

```
R1#show ip interface brief
```

Interface	IP-Address	OK?	Method	Status	Protocol
FastEthernet0/0	unassigned	YES	manual	administratively down	down
Serial0/0/0	unassigned	YES	unset	administratively down	down
FastEthernet0/1	unassigned	YES	unset	administratively down	down
Serial0/0/1	unassigned	YES	unset	administratively down	down

Routing table has no routes

```
R1#show ip route
```

Codes: C - connected, S - static, I - IGRP, R - RIP, M - mobile, B - BGP  
D - EIGRP, EX - EIGRP external, O - OSPF, IA - OSPF inter area  
N1 - OSPF NSSA external type 1, N2 - OSPF NSSA external type 2  
E1 - OSPF external type 1, E2 - OSPF external type 2, E - EGP  
i - IS-IS, L1 - IS-IS level-1, L2 - IS-IS level-2, ia - IS-IS inter area  
\* - candidate default, U - per-user static route, o - ODR  
P - periodic downloaded static route

Gateway of last resort is not set

```
R1#
```

```
R1#show running-config
```

```
!  
version 12.3  
!  
hostname R1  
!  
enable secret 5 $1$.3RO$VLUOdBF2OqNBn0EjQBvR./  
!  
interface FastEthernet0/0  
mac-address 000c.3010.9260  
no ip address  
duplex auto  
speed auto  
shutdown  
!  
interface FastEthernet0/1
```

```
R2(config)#interface serial 0/0/1  
R2(config-if)#ip address 192.168.1.2 255.255.255.0  
R2(config-if)#clock rate 64000 ← Hanya Untuk Serial Yang DCE !  
R2(config-if)#no shutdown
```

```
R3(config)#interface fastethernet 0/0  
R3(config-if)#ip address 192.168.2.1 255.255.255.0  
R3(config-if)#no shutdown  
R3(config-if)#interface serial 0/0/1  
R3(config-if)#ip address 192.168.1.1 255.255.255.0  
R3(config-if)#no shutdown
```

# Perintah Dasar Router

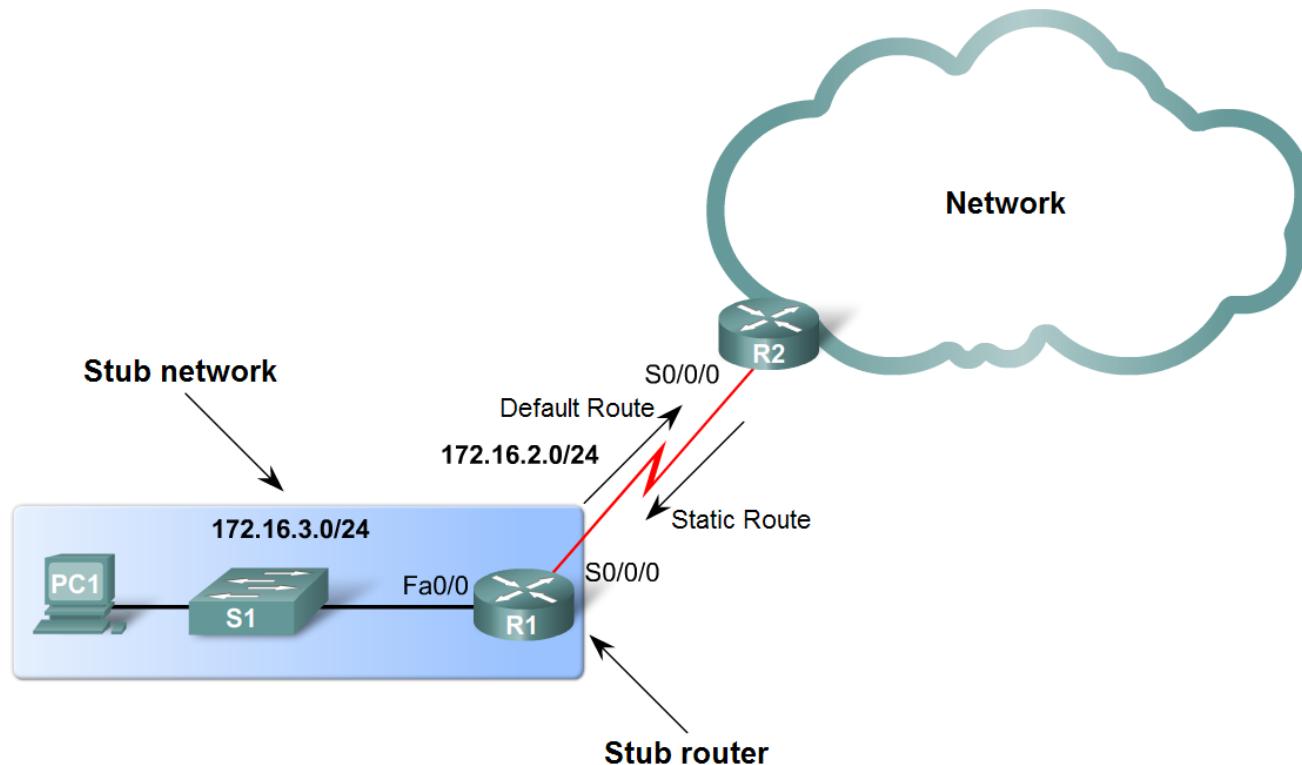

## Basic router configuration command syntax

Naming the router	Router(config)# hostname name
Setting Passwords	Router(config)# enable secret password Router(config)# line console 0 Router(config-line)# password password Router(config-line)# login Router(config)# line vty 0 4
	Router(config-line)# password password Router(config-line)# login
Configuring an interface	Router(config)# interface type number Router(config-if)# ip address address mask Router(config-if)# description description Router(config-if)# no shutdown
Configuring a message-of-the-day banner	Router(config)# banner motd # message #
Saving changes on a router	Router# copy running-config startup-config
Examining the output of show commands	Router# show running-config Router# show ip route Router# ip interface brief Router# interfaces

# Membuat Static Route

- **Purpose of a static route**

- A manually configured route used when routing from a network to a stub network

# Membuat Static Route

- **Perintah IP route**

- To configure a static route use the following command: **ip route**
- Example:
  - -Router(config)# **ip route** network-address subnet-mask {ip-address | exit-interface }

```
Router(config)# ip route network-address subnet-mask  
{ip-address | exit-interface }
```

Parameter	Description
<b>network-address</b>	Destination network address of the remote network to be added to the routing table.
<b>subnet-mask</b>	Subnet mask of the remote network to be added to the routing table. The subnet mask can be modified to summarize a group of networks.
<b>ip-address</b>	Commonly referred to as the next-hop router's IP address.
<b>exit-interface</b>	Outgoing interface that is used to forward packets to the destination network.

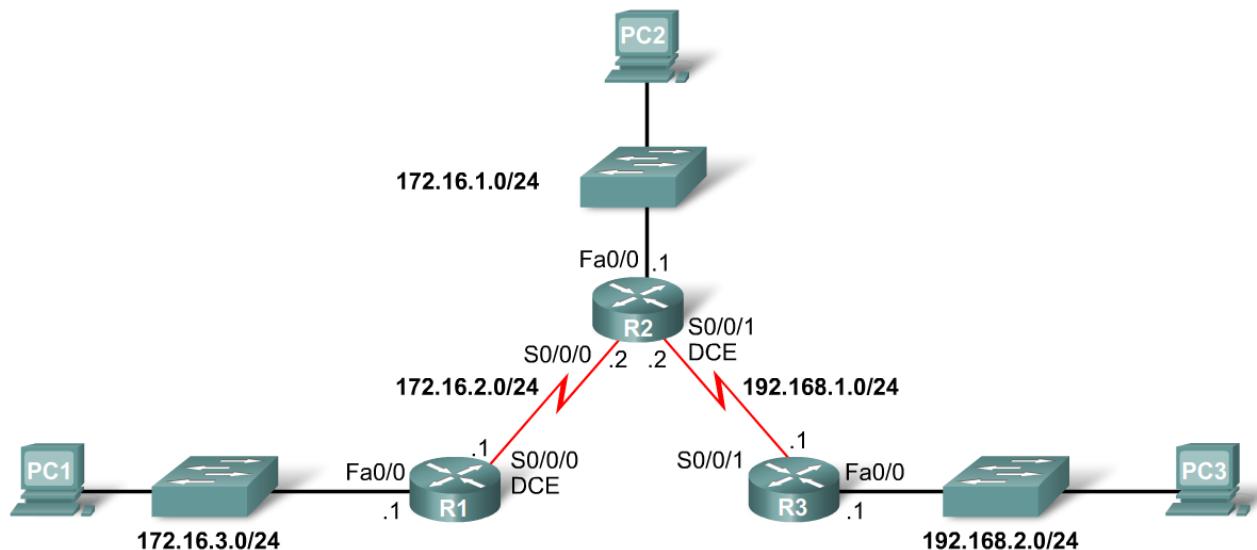

# Membuat Static Route

- Configuring routes to 2 or more remote networks**

- Perintah Static Route Pada R1

- -R1(config)#ip route 192.168.1.0 255.255.255.0 172.16.2.2 atau S0/0/0
    - -R1(config)#ip route 192.168.2.0 255.255.255.0 172.16.2.2 atau s0/0/0
    - -R1(config)#ip route 172.16.1.0 255.255.255.0 172.16.2.2 atau s0/0/0

## R1 static route to R2's LAN

# Membuat Static Route

- **Modifying Static routes**

- Existing static routes cannot be modified. The old static route must be deleted by placing **no** in front of the **ip route**

- Example:

- no ip route** 192.168.2.0 255.255.255.0 172.16.2.2

- A new static route must be rewritten in the configuration

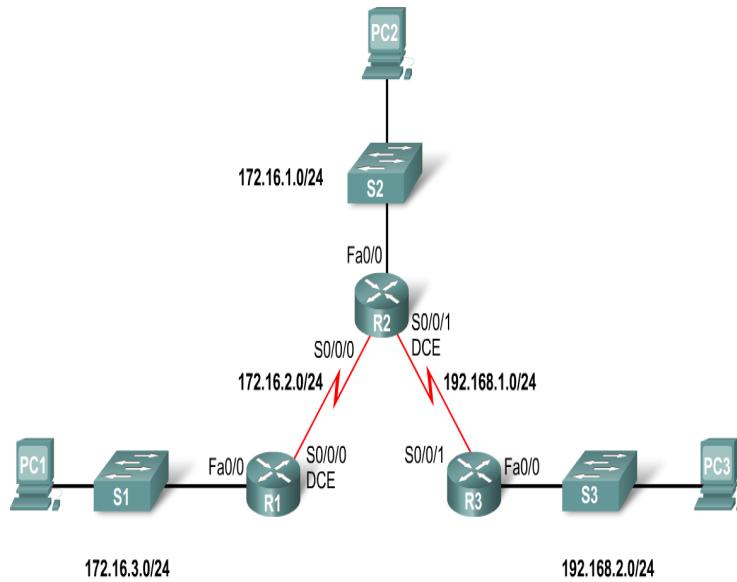

```
R1(config)#no ip route 172.16.1.0 255.255.255.0 172.16.2.2
R1(config)#ip route 172.16.1.0 255.255.255.0 serial 0/0/0
R1(config)#no ip route 192.168.1.0 255.255.255.0 172.16.2.2
R1(config)#ip route 192.168.1.0 255.255.255.0 serial 0/0/0
```

```
R2(config)#no ip route 172.16.3.0 255.255.255.0 172.16.2.1
R2(config)#ip route 172.16.3.0 255.255.255.0 serial 0/0/0
R2(config)#no ip route 192.168.2.0 255.255.255.0 192.168.1.1
R2(config)#ip route 192.168.2.0 255.255.255.0 serial 0/0/1
```

```
R3(config)#no ip route 172.16.1.0 255.255.255.0 192.168.1.2
R3(config)#ip route 172.16.1.0 255.255.255.0 serial 0/0/1
R3(config)#no ip route 172.16.2.0 255.255.255.0 192.168.1.2
R3(config)#ip route 172.16.2.0 255.255.255.0 serial 0/0/1
R3(config)#no ip route 172.16.3.0 255.255.255.0 192.168.1.2
R3(config)#ip route 172.16.3.0 255.255.255.0 serial 0/0/1
```

# Membuat Static Route

- Kerjakan topologi Contoh Hingga Semua Router dan komputer dapat terkoneksi Menggunakan static Route

Konfigurasi Interface

Device	Interface	IP address	Subnet Mask	Def. Gateway	Status
R1	Fa0/0	172.16.3.1	255.255.255.0	n/a	DCE
