How to write a JS? (1)

- In same file

```
<html>
<head><title>...</title>
</head>
<body>
<script language="javascript">
// code here
</script>
</body>
</html>
```

How to write a JS? (2)

- Different file

```
<script src="filename.js"></script>
```

Let's Make a Program!

```
<html>
<head><title>...</title>
</head>
<body>
<script language="javascript">
  document.write("Learn Javascript Programming!");
</script>
</body>
</html>
```

Let's Make a Program!

```
<html>
<head><title>...</title>
</head>
<body>
<b>This first part is Javascript</b>
<p>
<script language="javascript">
  document.write("Learn Javascript Programming!");
</script>
<p>
<b>End of HTML, after Javascript</b>
</body>
</html>
```

Let's Make a Program!

```
<html>
<head><title>Javascript is Easy!</title>
</head>
<body bgcolor="gray">
<script language="javascript">
  document.writeln("<pre>");
  document.write("<b><font size=5>");
  document.writeln("WELCOME TO JAVASCRIPT");
  document.write("</b></font>");
  document.write("<i>");
  document.writeln("A simple program to show a text");
  document.write("</i>");
  document.writeln("with a Javascript");
</script>
</body>
</html>
```

Another Program with Different File (1)

- File.js

```
document.writeln("<center>");  
document.writeln("<hr width=600 color=black>");  
document.writeln("<h1>Indonesia Computer University</h1>");  
document.writeln("<h1>Faculty of Engineering and Computer Science<h2>");  
document.writeln("<h3>Majoring of Information System<H3>");  
document.writeln("<hr width=600 color=black>");  
document.writeln("</center>");
```

Another Program with Different File (2)

- File.html

```
<html>
<head><title>Javascript is Easy!</title>
</head>
<body>
<b>This file use Javascript but in different file</b>
<P>
<script language="javascript" src="file.js"></script>
</body>
</html>
```
